

ASSEMBLY INSTRUCTIONS

AI COMES WITHOUT AN INSTRUCTION MANUAL. SO WE MADE ONE.

Ten guides. Three steps each. Each one builds a real thing, and each one is a rung on The 7 Levels of AI Proficiency.

THE 7 LEVELS	Level 1	01 Find a Use Case	FINDNAMECHECK	One job you already do more than once
		02 Choose a Tool	NEEDHAVERUN	A tool matched to that job
		03 Build a Prompt	WHODETAILSSHAPE	One written instruction that works
	Level 2	04 Add Your Voice	SAMPLESRULESKEEP	A short voice profile, saved
		05 Check the Answer	SPOTASKOPEN	A verification pass you ran yourself
		06 Protect Your Information	REDELLLOWGREEN	A red, yellow, green test for your own work
	Level 3	07 Work With Files	UPLOADASKCHECK	A document handled without retyping a word
		08 Improve the Result	SAYONESTAY	A revision sequence instead of a restart
		09 Save the Workflow	NOTICEWRITEKEEP	A reusable process, written down once
	Level 4-5	10 Build an Assistant	INSTRUCTIONSFILESAPPROVAL	An assistant that prepares the work and stops

TEN WAYS IT GOES WRONG	PARTS MISSING	TOO MANY PARTS	INSTRUCTIONS UNCLEAR	WRONG FINISH	NOT LOAD BEARING
KEEP OUT OF REACH	PARTS SOLD SEPARATELY	DO NOT DISASSEMBLE	REBUILT FROM SCRATCH	SOME ASSEMBLY REQUIRED	

You made the instruction manual
AI did not come with.
